REMARKS

Applicant wishes to thank the Examiner for the careful attention accorded to the instant application.

Regarding the objection to the specification, applicants respectfully request the requirement to correct line 34 and the last line on each page be corrected with a substitute specification upon such time that allowance of one or more claims is indicated. For the Examiner's reference, the specification of this case is identical to that of US Patent No. 6677858, which claims priority to the same application as the present case.

Regarding the rejections of claims 376 and 378 under 35 USC 112, second paragraph, the claims have been amended to overcome this rejection.

The Examiner has rejected claims 374, 375, 377 and 379 under 35 U.S.C. §103(a) as being unpatentable over U.S. Patent No. 6,317,500 to Murphy ("Murphy") in view of U.S. Patent No. 6,104,815 to Alcorn et al. (Alcorn) and further in view of U.S. Patent No. 5,243,652 to Teare et al. ("Teare"), and claims 376 and 378 under 35 U.S.C. §103(a) as being unpatentable over Murphy in view of Alcorn and further in view U.S. Patent No. 6,522,875 to Dowling et al. ("Dowling").

It is respectfully submitted that Claims 374-379 have been amended to overcome any rejections based on the above discussed references. Specifically, the references do not teach, alone or in combination, the added feature of providing a web-based device trajectory monitoring server to allow monitoring of TS trajectories of each network computing device, and to determine when and where received encrypted radio messages have been decrypted and visually or sonically displayed by the network computing device.

For the foregoing reasons, Applicants respectfully submit that all pending claims 374-379 are now in condition for allowance. Early notice to that effect is earnestly solicited.

Respectfully submitted,

By
